BASIC LINUX TRICKS

1.)running a command for specific time in linux
→ one property of linux command is the time limit you can set a time limit for any command.
→ which helps us to execute command with a time limit.
→ linux has a command line utility for this is timeout.

```
[root@localhost ~]# timeout 5s date
```

Date will run for 5s.

2.) to find the servers public ip address
Using the api of ipinfo and json data.

```
[root@localhost ~]# curl https://ipinfo.io/ip
```

This above command is usd to see the servers public ip address.

Once got the public server ipaddr use you can make a request to **ipvigilante.com's** api to fetch geolocation data using following command.

```
[root@localhost ~]# curl https://ipvigilante.com/<your public server ip address>
```
